

## Chapter Eight

### Why Isn't It Already In Use?

Doctor Advertising Major Pharmaceutical Cartels

The obvious question is, if hyper-oxygenation is so simple and effective, why has it taken so long to discover it? Ozone is hardly new and hydrogen peroxide has been on the market for over a century. Why aren't all doctors already using it? How come this story isn't all over the major news outlets?

Turning the question around helps clarify the problem. Just exactly what would happen if a cure was discovered that was completely effective against the vast majority of diseases, ridiculously cheap and plentiful, and can be self-administered without a physician?

Would the current medical establishment welcome a breakthrough that could render 98% of all drugs, testing and disease related surgery obsolete? What would the response be of the

pharmaceutical industrialists, hospital chain owners, health insurance moguls, AMA, and FDA? Would you expect to read or hear such an announcement from any medical journal or media outlet owned by people financially committed to the medical status quo, which is practically all of them? How many want to make their own occupation unnecessary? And if the cure had already been suppressed once, wouldn't the possible blame for allowing people to die without it provide even more incentive continue keeping the whole thing quiet?

All right then. This is precisely the situation that exists, and the cure has indeed been around for ages. It has been independently reported to be effective against virtually every disease at one time or another, in thousands of public-domain medical articles, which had never been collected or correlated until recently.

And it is so simple and basic that concealing it from physicians and the general public has required a tremendous smoke screen of artificial complications, narrow specializations, symptomatic classifications and user hostile treatments.

If this is so, it follows that the more profit-fixed elements of the medical establishment will not be too thrilled about the recent surge in interest in oxygen therapies.

The drug industry has expanded enormously since WWII, while America's level of health has dropped from the world's highest to the lowest among the industrialized nations. It does look as if the bottom line has been money and not health, for a long time.

The battle for the future of medicine, between Nature's truth and lucrative lies, is about to really heat up. We can expect to see disinformation articles and newscasts with persuasive medical experts, some of whom will even believe what they're saying, warning of the dangers of hydrogen peroxide, ozone and even regular oxygen. These reports will attempt to blur the distinction between using therapeutic dosages at safe dilutions, and the harmful effects of excessive concentrations. Plenty of grizzly examples are available, of what happens when various tissues are over-oxidized.

Anti-oxygenation propaganda pieces will probably not mention that over the years the FDA has approved H<sub>2</sub>O<sub>2</sub> as a skin antiseptic at full 3% strength, as a hair bleaching agent at 6%, and for internal use as an additive for milk and in antiseptic long-shelf-life packaging. Nor are they likely to acknowledge that many European countries use ozone and H<sub>2</sub>O<sub>2</sub> in their cities' water supply, and that they enjoy much better health than in the US. And they will be unable to truthfully cite any examples of people who were harmed by using H<sub>2</sub>O<sub>2</sub> in the current demonstrated therapeutic concentrations.

If not enough of us move to help spread the news of this

alternative, those who fear it could reduce our ability to buy H<sub>2</sub>O<sub>2</sub>.

Also, product tampering has thus far mostly targeted Bayer Aspirin's competitors, in case you hadn't noticed, but drugstore hydrogen peroxide would not be immune to such tactics. One approach might be to plant a contaminated batch in a town where oral use is catching on and the medical establishment is losing ground, so someone gets hurt and the story gets nationwide coverage.

### **NEVER USE DRUG STORE H<sub>2</sub>O<sub>2</sub> FOR INTERNAL USE**

It is vital for Americans to realize that current economic dynamics don't allow the businessmen in charge of health and industry any incentive at all, to make people permanently healthy and lose them as customers.

It's the same reason why the energy conglomerates do not encourage citizens to become energy-self-sufficient, the Pentagon has no incentive to stop wars, and the American Psychiatric Association sees no advantage to ending mental illness.

Fortunately the majority of physicians really do want to see their patients get well. They also wouldn't mind gaining the respect and admiration with which physicians were once widely regarded. When it comes down to choice between saving lives and protecting profits, most will be brave enough to overhaul their medical belief systems, discard obsolete methodologies, and basically tell the pharmaceutical conglomerates to go shove it. The rest will simply get left behind.
